Senior Solutions Engineer with fourteen years across enterprise search and AI, healthcare data, and SaaS platforms operating at scale. I lead technical discovery and solution architecture through the full pre-sales cycle, and build **full-stack prototypes** in Python, JavaScript/TypeScript and SQL — integration proofs and validation workflows measured on quality, latency and cost. I communicate tradeoffs clearly to engineers and to executive stakeholders.

EXPERIENCE — 2012 – Present

Senior Sales Engineer | Lucidworks — 2023 – PRESENT

- Lead technical discovery, demos, and POCs for enterprise AI search, RAG, knowledge management, and e-commerce discovery across complex sales cycles.
- Own the technical strategy across the full pre-sales cycle, from discovery and solution design through architecture, integrations, security review, evaluation, and executive presentation.
- Architect end-to-end solutions spanning APIs and connectors, indexing pipelines, structured data, hybrid retrieval, AI enrichment, LLM gateways, grounding, and citations.
- Build full-stack prototypes that combine APIs, structured data, deterministic logic, hybrid search, and grounded LLM workflows, balancing relevance, quality, latency, cost, and implementation complexity.
- Turn field learnings into product requirements, reusable demo patterns, feature-gap analysis, and competitive insight for Product and Engineering.

Pre-Sales Solutions Architect | Treasure AI — 2022 – 2023

- Delivered technical demonstrations built on SQL/Presto/Hive, ML solutions, Kafka, Snowflake, JavaScript, Python, APIs and integrations, and workflow automation.
- Led presentations, product demos and technical consultations, learning prospects' needs and mapping them to platform capabilities and benefits.
- Answered RFPs and carried customer needs and market trends back into product development discussions.

Machine Learning Solution Architect | IRON MOUNTAIN® — 2020 – 2022

- Established the architecture and technical specifications for complex, custom, cloud-based (GCP) machine learning solutions, and oversaw their implementation.
- Counseled customers as the lead technical product and machine learning expert, meeting and exceeding client business needs.
- Set priorities from project requirements and served as technical escalation point for developer, ML, QA, DevOps and support teams.

ARCADIA 2012 – 2020

Product Manager

2019 – 2020

- Owned a platform that automated, scaled and monitored the implementation of Arcadia's software and the integration and ETL of thousands of data sources.
- Managed the backlog, work queue and sprints for the platform back-end team and the web team.

Technical Implementation Team Manager

2017 – 2019

- Managed twelve employees across two technical product implementation teams.
- Developed a full-stack set of applications to monitor real-time operational metrics across the organization, using D3, Python, SQL, Node.js and multiple APIs.
- Chosen for an executive SWAT team that revamped the implementation process within AWS, leveraging Spark, machine learning and a redesigned lean workflow.

Solutions Architect

2015 – 2017

- Led client engagements to capture requirements, articulate Arcadia's technology capabilities and devise custom architectural plans aligned with clients' strategic objectives.
- Built a predictive model for the likelihood of a patient missing a scheduled appointment, from dozens of clinical, claims and demographic data points.

Senior Consultant

2013 – 2015

- Served as onsite tech lead for a major insurance client at the onset of HealthCare.gov integration and enrollment reconciliation.

Consultant

2012 – 2013

- Integrated and analyzed data from an array of EHR and health plan sources, and led the UX/UI effort for a large custom enterprise application.

EDUCATION

Northeastern University
B.S. Industrial Engineering

General Assembly
Data Science · Visual Design — Boston, MA

PATENT · US11789990B1

Automated Splitting of Document Packages and Identification of Relevant Documents

A document splitting and identification model developed at Iron Mountain for large lender clients.

Co-author · Application 17/733,581

TECHNICAL SKILLS

Core	Python · JavaScript/TypeScript · SQL · REST APIs · Node.js
AI & Search	LLM Applications & APIs · RAG · Hybrid and Vector Search · Solr · Embeddings · Prompt Engineering · Evaluation · AI Data Enrichment
Cloud & Database	AWS · GCP · Azure · SQL Server · BigQuery · Snowflake · Postgres · Redis
Platform & Tooling	Docker · Kubernetes · Message Queue/Streaming · Integrations · Git · Jira
Also	D3.js · PySpark · Pandas · Scikit-learn · Jupyter · Presto · Jenkins · HTML/CSS
